18.   Features being investigated

The SIMULA Standards Group appoint a Technical
Committee to study features needing clarification
or which may possibly be new recommended extensions.

The following features are currently being
investigated:

- For statements in which the controlled variable is
  a variable called by name, procedure identifier,
  subscripted variable or remote identifier.

- class directfile

- reference parameters

- the procedure "call"

- syntax of blocks and statements

- syntax of conditional expressions

- hardware representation standards

A closer description of these features is given in
[4] and [5].
